

Andy Huynh

Summary

Currently I am working as a tech recruiter at Deliveroo but hoping to create enough React projects to make the move over to becoming a dev.

I've had a very fruitful career so far, coming from a nursing background to becoming a recruiter and now looking to make my final move over to development where my interests lie.

My end goal is to build something useful for the healthcare sector but in the meantime I'm honing my skills in everything front-end.

Tech Recruiter

Nov 2018 - Present

I joined the Deliveroo recruitment team focused on hiring Product Managers, Product Marketing Managers and Software Engineers. When I joined we were around 20+ in the team and now have grown to over 60+ internationally

I have been involved in hiring across different levels of seniority but mostly focused on Senior/L6+.

Aside from recruiting for the Engineering team at Deliveroo, I have been heavily involved in onboarding, training and building out our recruitment team.

Talent Acquisition

Jan 2018 - Oct 2018

When I joined ClearScore, I was 1 out of 3 recruiters in the team. We grew the team from 100 employees to over 200 internationally when I left.

I was focused on hiring across all areas of the Engineering team, mainly focused in Mobile, Backend, QAs and Product Managers.

During my time at ClearScore, I was heavily involved in interview training, building out the ClearScore brand and diversity hiring with over 65% of my hires being in this category.

Tech Recruiter

April 2016 - Jan 2018

After working 4 years as a neonatal nurse, I wanted to pursue my interest in the world of tech and started this journey working as a Tech recruiter for Arrows Group.

Working at Arrows Group gave me a thorough insight into how tech companies ran and the different specialities each company had. I was initially involved in hiring DevOps Engineers and transitioned into software engineering.

Neonatal Nurse

Jun 2012 - March 2016

After graduating from King's College London with a Bachelor in Paediatric Nursing, I embarked in a career as a neonatal nurse working for well-known hospitals across London.
